PROFESSIONAL PROFILE

Enterprise Solution Architect with 15+ years of experience delivering large-scale telecom, CRM, and cloud platform transformations. Experienced in defining solution architectures, establishing technical governance standards, and leading modernization initiatives across distributed enterprise systems supporting more than 310 million subscribers.

Specialized in AWS cloud architecture, microservices, event-driven systems, infrastructure automation, and platform resiliency. Able to translate business objectives into scalable technical solutions while balancing performance, security, operational complexity, and cost. Experienced working with cross-functional engineering, product, and leadership teams — including direct engagement with customer architects and technical stakeholders — to guide architecture decisions from strategy through implementation.

CORE COMPETENCIES

Architecture & Governance	Cloud & Distributed Systems	Platform Engineering
- Solution Architecture - Architecture Review Boards (ARB) - Technical Strategy & Roadmaps - Technology Evaluation - Stakeholder Management - Design Reviews & Risk Assessments - AWS Well-Architected Framework	- AWS Cloud Architecture - Microservices Architecture - Event-Driven Architecture - API Architecture & Governance - Domain-Driven Design (DDD) - High Availability & Resiliency - Security & Zero-Trust Design - Landing Zone Design	- Infrastructure as Code (Terraform) - CI/CD Architecture - GitHub Actions & OIDC Federation - Kubernetes & Container Platforms - Cloud Cost Optimization (FinOps) - Pre-Sales PoC / Proof-of-Value - Customer Advisory Engagements

TECHNICAL EXPERTISE

AWS Core & Networking	EC2, VPC, Private Subnets, NAT Gateway, VPC Peering, VPC Endpoints, IAM, Route 53, S3, CloudFront, CloudWatch, CloudTrail, KMS
AWS Integration & Serverless	Lambda, API Gateway, SQS, SNS, EventBridge, Step Functions
AWS Databases & Caching	Aurora PostgreSQL Serverless v2, RDS PostgreSQL/MySQL, RDS Proxy, DynamoDB, ElastiCache Serverless (Valkey)
Containers & Orchestration	EKS, ECS, ECR, Fargate, Kubernetes
Security & Operations	Cognito, Secrets Manager, Systems Manager (SSM), AWS Budgets, Cost Explorer
Infrastructure Automation	Terraform (Modular, Multi-Env, Remote State), GitHub Actions, OIDC Federation

PROFESSIONAL EXPERIENCE

Solution Architect | Telstra Global Services

March 2024 – Present • Pune, India (Hybrid)

- Provide architectural governance and design leadership for AWS-based telecom platforms supporting high-volume billing and customer management workloads serving more than 310 million subscribers.
- Lead modernization initiatives to decompose tightly coupled systems into event-driven services using AWS messaging and integration patterns (SQS, SNS, EventBridge), contributing to a 35% improvement in delivery timelines.
- Evaluate architectural trade-offs — including synchronous versus asynchronous communication models — and advise engineering and product teams on design decisions; improved platform availability from 99.2% to more than 99.9% while reducing cascading failure risks.
- Define and govern TMF-compliant API standards and integration patterns supporting 30,000–40,000 daily cross-platform transactions, including rate-limiting and circuit-breaker controls.
- Partner with engineering teams to identify cloud optimization opportunities, contributing to a 22% reduction in infrastructure operating costs through rightsizing and workload optimization.
- Conduct architecture reviews and Well-Architected Framework assessments to ensure alignment with enterprise standards, long-term platform strategy, and operational readiness.

Solutions Architect — CRM Platforms | Netcracker Technology

December 2022 – March 2024 • Gurugram, India (Hybrid)

- Defined solution architectures connecting CRM platforms with telecom BSS systems across complex enterprise integration landscapes.
- Designed scalable service boundaries using Domain-Driven Design principles, improving maintainability and enabling independent deployment cycles; contributed to a 28% reduction in integration-related defects.
- Led architecture discussions with engineering and business stakeholders — including client architects and senior leadership — to establish platform modernization roadmaps and gain alignment on design decisions.
- Designed resilient messaging architectures using asynchronous communication patterns to improve fault tolerance and reduce operational dependencies across hybrid-network environments.

Senior Subject Matter Expert / Solution Design Lead | Amdocs India Development Centre

March 2015 – November 2022 • Pune, India

- Contributed to architecture and solution design for Tier-1 telecom BSS platforms covering billing, charging, invoicing, payment, and CRM domains across multiple global operator environments.
- Produced solution designs, integration specifications, and implementation strategies for large-scale telecom transformation programs; acted as a key technical advisor during complex delivery phases.
- Collaborated with architects, product owners, and engineering teams to align platform evolution with business objectives and operational requirements.
- Supported modernization initiatives involving API-driven integrations, service decomposition, and cloud adoption planning.

Software Test Engineer | Tech Mahindra & Netcracker Technology

January 2011 – February 2015 • India

- Participated in delivery and validation of enterprise telecom applications; built foundational expertise in end-to-end telecom business processes, system integrations, and OSS/BSS application behaviour.

ARCHITECTURE PROJECTS & TECHNICAL BLUEPRINTS

High-Concurrency Transactional Booking Platform

[GitHub Repo: github.com/abhinavcloud/Online_Ticketing_System](https://github.com/abhinavcloud/Online_Ticketing_System)

[Website: mytickets.click](https://mytickets.click)

- Designed a cloud-native booking platform to evaluate AWS serverless architecture patterns under high transaction concurrency and write contention.
- Key architecture decision: chose distributed seat-locking via ElastiCache Serverless (Valkey) over database-level row locking to prevent connection exhaustion on Aurora Serverless v2 while maintaining transactional consistency at scale.
- Implemented API Gateway with Cognito and Google OAuth for enterprise SSO patterns; RDS Proxy deployed for connection pooling and AZ abstraction across Lambda scaling events.
- All infrastructure provisioned via modular Terraform with OIDC-based GitHub Actions pipelines — no long-lived credentials.

Enterprise Infrastructure as Code Framework

[GitHub Repo: github.com/abhinavcloud/Three-Tier-AWS-Architecture-Terraform](https://github.com/abhinavcloud/Three-Tier-AWS-Architecture-Terraform)

- Developed reusable Terraform modules supporting multi-environment deployments, network isolation, remote state management, and infrastructure standardization — aligned with Landing Zone design principles.
- Configured OIDC-based GitHub Actions integration to eliminate long-lived cloud credentials and improve deployment security posture.

CloudFront Global Edge Delivery Platform

[GitHub Repo: github.com/abhinavcloud/shortURL](https://github.com/abhinavcloud/shortURL)

[Website: lshort.in](https://lshort.in)

- Built a globally distributed serverless URL redirection platform using CloudFront, S3, DynamoDB, and Cognito; demonstrates low-latency edge delivery patterns and secure identity-driven access controls.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- AWS Certified SysOps Administrator – Associate
- AWS Certified AI Practitioner
- Certified Kubernetes Administrator (CKA)
- Kubernetes and Cloud Native Associate (KCNA)
- HashiCorp Certified Terraform Associate
- GitHub Actions Certified
- [AWS Certified Solutions Architect – Professional \(in progress, target Q3 2026\)](#)

EDUCATION

Bachelor of Technology (B.Tech) — Electronics & Computer Engineering | ICFAI University, Dehradun | 2006 – 2010
